

AQUEOUS
SYSTEMS, INC.

PHARMACEUTICAL STEAM SAMPLING

The PS-series of steam sampling products by AQUEOUS SYSTEMS are engineered and fabricated with safety, efficiency, and operability as our focus. The highest regard is given to maintaining the integrity of your quality samples.

The PS-series is a complete and comprehensive package available to the industry for pure or clean steam systems. From the detailed engineering and submittal package, to the turnover documentation, we have meticulously engineered every component and every detail.

Critical steam parameters typically measured include total organic carbon (TOC), conductivity, microbial levels, and endotoxin.

Mobile or Stationary, we have a product for your critical application.

TECHNICAL DATA

- Two (2) Models Available: 0 - 45 psig & 0 - 70 psig
- Multiple Heat Transfer Areas Available: 0.75 sqft. - 4.19 sqft.
- All Stainless Steel, Sanitary Design
- Sample Temperature Indication
- Isolation Valves & Pressure Safety Valve
- Use Chilled Water, Cooling Tower Water, City Water, etc.

POPULAR OPTIONS

- Site Acceptance Test/Commissioning Procedures & Execution
- Hose Packages
- Electropolished Piping
- Third Party Weld Inspection
- Double Tubesheet Heat Exchangers
- Installation - Engineering & Construction
- Steam System Distribution Assemblies
- *Coming Soon* - HTM 2010 Test Kits & IQ/OQ Protocols

If you have a specific requirement not listed above, we have the capability to custom engineer and fabricate to your exacting specifications.
